Edwin Cubillos

Software Engineer | AI Engineer| Expertise in Development,
Architecture, Databases | AWS | Python | Go | SQL | LLM | Vibe
coding
Bogota, D.C., Capital District, Colombia

Summary

With over nine years in software engineering, I excel at building scalable applications and integrating cutting-edge technologies like AI and cloud solutions. Proficient in languages and frameworks such as Python, Django, Node.js, and React, I lead and mentor teams to deliver innovative, high-quality software. Passionate about continuous learning and leveraging new technologies to drive business success.

Milabs.com

tech stack: Python cloudformation, Go

Mercado Libre
Software Engineer
February 2024 - April 2025 (1 year 3 months)
Bogotá
Generative AI TEAM

Focus on harnessing and deploying advance technologies from industry leaders such as OpenAI, Amazon Bedrock, Vertex AI and Facebook to enhance internal processes.

Key responsibilities:

Technology integration: seamlessly incorporate cutting-edge machine learning and AI technologies into existing systems.

Tool deployment:

- image recognition
- image generation and variation
- text and chat enchantments: text completion
- advance AI solutions.

tech stack: Golang, Python, FastApi, Flask, Docker, BigQ, SQL, AWS, Azure AI, OpenAI, BEDROCK, Vertex, LLMS

Services Steam

Principal Engineer

August 2023 - February 2024 (7 months)

Latam

Application Development: Regularly develop, test, and deploy robust web applications using Python with Django, Node.js, and React, ensuring adherence to best practices and efficient code structure.

Cloud Management: Oversee and manage deployment processes on AWS, optimizing for scalability and performance, and ensuring system security and data integrity.

Team Leadership: Guide, mentor, and provide technical direction to junior engineers and development teams, ensuring project milestones are met and aligning with business objectives.

Solution Architecture: Collaboratively design and implement system architectures, evaluating trade-offs and ensuring long-term maintainability and scalability.

Code Reviews: Conduct regular code reviews, promoting a culture of excellence, continuous learning, and quality assurance.

Continuous Integration/Continuous Deployment (CI/CD): Implement and maintain CI/CD pipelines, ensuring rapid and reliable code deployments.

Collaboration: Work closely with product managers, UX/UI designers, and stakeholders to align software solutions with business needs, and provide regular updates on project progress.

Problem Solving: Address and troubleshoot system issues, bugs, or performance challenges, providing quick resolutions to minimize disruptions.

Research & Development: Stay updated with the latest industry trends, tools, and technologies, and suggest ways to incorporate them for enhancing product capabilities or streamlining processes.

Uber

1 year 3 months

Software Engineer

June 2022 - May 2023 (1 year)

Colombia

I worked as a Software Engineer, focusing on the integration of the grocery section within the back-end APIs and the iOS and Android mobile applications. I played a key role in developing high-quality code and ensuring seamless integration between the different components. The back-end APIs followed a REST architecture and implemented a layered design approach, which allowed for scalability and maintainability. I collaborated closely with cross-functional teams, including product managers and designers, to deliver efficient and user-friendly solutions. Working at Uber provided me with invaluable experience in large-scale systems and honed my ability to deliver impactful software solutions in a fast-paced and challenging environment.

Backend Engineer

March 2022 - June 2022 (4 months)

Colombia

I was actively involved in the onboarding process for new shoppers on the Cornershop app. Utilizing my skills in Python, React.js, and RESTful APIs, I contributed to developing efficient and scalable backend solutions. Collaborating closely with cross-functional teams, I worked on features that streamlined user registration, authentication, and profile management. My responsibilities included designing and implementing robust APIs, integrating

with various internal and external systems, and optimizing performance to handle a high volume of requests. Through my contributions, I helped improve the reliability and usability of the Cornershop app, making it easier for shoppers to join the platform and deliver exceptional service to customers.

Nokia

3 years 11 months

Senior Software Engineer

December 2020 - February 2022 (1 year 3 months)

Bogota,D.C., Capital District, Colombia

As a Team Lead, around 30 percent of my working time, I mentored team members, coaching them about best practices and pragmatic approaches to tackle challenges and giving them feedback regularly.

Team Lead And Sr Python developer

Outsourcing Software Developer

February 2019 - November 2020 (1 year 10 months)

Rio de Janeiro

Senior Python/Django Developer

Outsourcing Software Developer

April 2018 - January 2019 (10 months)

Bogotá D.C. Area, Colombia

Mid Python Developer

Axiacore

Software Web Developer

January 2018 - April 2018 (4 months)

Bogotá D.C., Colombia

As a software web developer, I excelled at adding new features and delivering high-efficiency code in a fast-paced software factory environment. Leveraging cutting-edge technologies and industry best practices such as CI/CD and automation, I ensured seamless integration and deployment of code. Additionally, I maintained thorough and well-documented processes to facilitate efficient collaboration and knowledge sharing within the team.

rapigo.co

Backend Developer

March 2017 - January 2018 (11 months)

Bogotá D.C. Area, Colombia

Enhancing and implementing new functionalities in applications, conducting unit testing, seamlessly integrating code improvements between the frontend and backend, maintaining well-organized and commented code, utilizing Git for version control, and implementing efficient algorithms. Proficient in debugging, bug fixing, API integrations, and thorough documentation. Strong team player with skills in collaborative problem-solving, web services, object-oriented programming (OOP), and front-end development.

MYO-PYTHON-BEBOP

Freelance

October 2015 - May 2016 (8 months)

Colombia

Thesis of grade, Python software to fly a Bebop Drone with MYO armband

ROCH Electronics

Junior Software Engineer

January 2014 - December 2014 (1 year)

Boyacá Area, Colombia

Junior Software Engineer, testing-conversions-debugging and modifications technologies: Python , C, C++,C#, Matlab, ASM(PICS)

Education

Universidad Pedagógica y Tecnológica de Colombia

Electronic Engineer, Electronic Engineering · (2010 - 2016)
